

Initial Image Interpretation of the Appendicular Skeleton

WEB BASED SHORT COURSE

Following the successful introduction of an international pilot scheme, a web based short course in Initial Image Interpretation of the Appendicular Skeleton is now being launched. The structured course, which focuses on radiographic appearances in the trauma setting, is intended to update skills which will be of value to radiographers and/or other healthcare practitioners to further aid immediate patient management.

Start date

The short course will be available from June 2011 and the closing date for applications is 31st May. Applicants will need to have the support of a radiologist mentor and their employer.

Delivery of the course

The short course material can be used purely as a web based resource, however, if there is sufficient interest from within a particular country or region then a short two day introductory block can be delivered in the locality by experienced staff from this university.

Outcomes of the course

On successful completion of the short course a CPD Certificate (endorsed by the College of Radiographers) will be issued. It may also be possible to undertake further studies to complete a Postgraduate Certificate in Clinical Reporting (Appendicular Skeleton).

Cost of the course

Introductory visit by CCCU staff at £350 per person (minimum group size of 15 participants). Smaller group sizes may be negotiable.

Access to Web-based material (no visit) at £250 per participant.
